

FA 06

Macro B Programming

UK-TRN-FA-00006-EN

DESCRIPTION

This course focuses on the macro programming functions, statements and variables.

The attendees will learn the range of macro functions and variables available to be used in G code programming. Using worked examples to demonstrate their use and exercises to practice in the virtual environment of CNC guide 2

OBJECTIVES

At the end of the course participants will be able to:

- Set custom macro variables
- Use system macro variables
- Use macro statements
- Use mathematical functions

TOPICS COVERED

- What is a macro program
- Variable types
- Mathematical functions
- Statements
- System variables
- Creating alarms and messages
- Writing and creating basic macro programs
- Demonstration of advanced macro programming
